Learning, teaching and training activities

BRAILA

ROMANIA

Between August 21-25, 2023, our organization SC Psihoforworld, at Braila Neurofeedback and Psychology Center, hosted the Learning, teaching and training activities with parents of children with disabilities and professionals.

Representatives from 4 partner countries participated in these activities, namely: Germany, Czech Republic, Turkey and Romania. Thanks to the Erasmus Plus program, we managed to contribute to the exchange of best practices in terms of innovative methods and techniques in the recovery process of children with disabilities.

Thus, the parents of "special" children have learned how to apply certain working methods with their own children in order to offer them support including in the family environment. Work techniques such as: Montessori/ABA/Pecs were exemplified and explained to parents in the most accessible way.

The participants also had the opportunity to discover the importance of combining psychology with technology by participating in various demonstration activities on: Neurofeedback Therapy, Tomatis Therapy, Soundsory Therapy and Language Disorder Therapy with the help of Forbrain headsets.

Another aspect that we would like to mention with pleasure is the fact that in order to promote cultural interaction we have organized a trip to visit the city of Braila and at the same time a beautiful boat trip on the Danube River.

Thank you Erasmus!

Thank you European participants!
